

## Our comprehensive safety philosophy

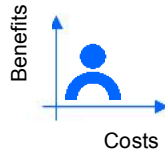

Our ethical obligation:  
**People-centered**

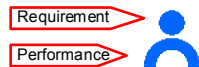

Our primary aim:  
**Protecting people**

Our financial obligation:  
**Optimize costs and benefits**

Our standard:  
**Comprehensive quality**

Our safety philosophy:  
**Safety through dynamic signal processing**

Our approach:  
**Error-tolerant systems for success**

“Error-free” systems, however, result in high costs

## How to find us

**We are located** within easy access of public transport and the KKL arts and conference centre in Lucerne. We are just a three minutes' walk from the railway station, bus stop or boat pier.

Schiff = Boat Bus = Bus Bahnhof = Railway station

## NSBIV AG

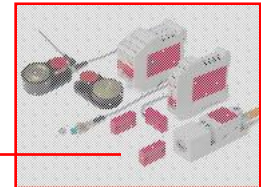

*Nationales Sicherheitsbüro Industrie und Verkehr*

Our name translates as the “National Safety Office for Industry and Traffic”. We promote occupational and process-related safety.

Our specialist professional knowledge is rooted in many years of experience in hazard analysis and risk assessment.

Methodical, analytical thinking and action are the foundations of all we do.

### Certification

### ASA consulting

### Expert reports

### Training

## Certification Manufacturer consulting

**We examine** – in our capacity as the certification body *SIBE Schweiz* – the conformity of machinery to Directives 2006/42/EC, and issue certificates (type-examination certificates).

In particular, we examine production machinery, transport facilities, electrical and electronic safety components and controls.

We also check personal protective equipment designed to prevent falls from a height, in accordance with Directive 89/686/EEC.

*SIBE Schweiz* is an accredited body in Switzerland and holds Notified Body status in the European Union.

Accreditation SCESp 046  
Notified Body 1247

**We support manufacturers** in the conformity evaluation process and in drawing up documentation in accordance with the Machinery Directive 2006/42/EC respectively, and we help to work out measures which comply with the assessed risk and reflect state-of-the-art technology.

## ASA consulting

**We support you** with the implementation of FCOS guideline no. 6508. We offer firms and groups of companies, as well as municipalities, care and residential homes and hospitals individual, customized solutions.

ASA refers to the role of company doctors and other occupational safety experts. Our ASA strategy is to share our vast experience in this field by identifying risk in three phases:

- Site inspection
- Recording and analysis of incidents and accidents
- Hazard evaluations in the case of new acquisitions and new building and remodeling projects

In doing so we can pinpoint hazards, present them in a comprehensive yet comprehensible way, and draw up proposals for preventative action.

Our services also include training of safety managers and safety officers.

Working on site, we are able to offer you immediate, professional support. You can call on us at any time with your safety-related questions.

This considerably relieves the burden on safety and line managers.

With our efficient methods and business-sense approach, we help you to satisfy statutory requirements concerning company doctors and other occupational safety experts.

## Expert reports Training

Accidents don't just happen. They are caused. Often it's hard to say how or why an accident happened.

**We investigate for you** what causes and effects led to the incident. We analyze chains of events and system failings.

**We train** manufacturers and users, professionals and managers, employers and employees, taking a personal and practical approach. Our classroom is right where the acquired skills and knowledge are to be used – in the workplace.
